PROFESSIONAL SUMMARY

DevOps / Cloud Engineer with 2.6+ years building CI/CD pipelines, provisioning AWS infrastructure with Terraform and running Kubernetes and Docker workloads for a leading US banking client. Drove AI-assisted engineering adoption in a regulated environment, alongside ETL/batch operations (~600 Autosys jobs), Oracle SQL validation, production monitoring and incident management.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, VPC, S3, IAM, Lambda, CloudWatch, EKS, ECR), Azure, Terraform, Infrastructure as Code (IaC)
Containers & Orchestration: Kubernetes, EKS, AKS, Docker, Helm Charts, GitOps, ArgoCD, Argo Rollouts, Kyverno, RBAC, YAML Manifests

CI/CD & Automation: Jenkins, GitHub Actions, CI/CD Pipelines, Python, Bash, Shell Scripting, Git

Data Engineering & ETL: ETL, Data Pipelines, Data Warehouse, Autosys, CA Workload Automation (CA WA), Oracle SQL, Oracle Database, MySQL, Data Integrity Validation, Batch Processing

Monitoring & Observability: Dynatrace, Prometheus, Grafana, AWS CloudWatch, Alertmanager, Root Cause Analysis, Incident Management

Security & Governance: ServiceNow, CyberArk, SonarQube, Trivy, OWASP Dependency Check, gitleaks, IAM Policies

AI Tools & Other: GitHub Copilot, Amazon Q, Claude, Gen AI Tools, Linux, Unix, Java, Spring Boot, REST, Microservices, Agile

PROFESSIONAL EXPERIENCE

DevOps Engineer — Cognizant Technology Solutions

Dec 2023 – Jun 2026

Hyderabad, Telangana, India (Hybrid) | Client: Leading US Banking Institution

- Piloted GitHub Copilot and Amazon Q inside a regulated banking environment, building a working microservices proof-of-concept and addressing security and data-residency concerns, winning client approval to adopt AI coding assistants across the delivery workflow.
- Developed an AI-assisted incident response playbook that generates structured SOP output and auto-routes tickets to the correct support group, reducing manual triage on recurring production issues.
- Led an AI-assisted Java 8 to 17 migration across banking services, automating dependency upgrades and code remediation to modernize legacy applications with minimal manual rewrite.
- Migrated Oracle SQL database workloads to AWS, planning schema and data validation to keep downstream ETL and reporting consistent through cutover.
- Built and maintained CI/CD pipelines with Jenkins and GitHub Actions across 3 enterprise banking applications, automating build, test and deployment and cutting deployment time from ~2 hours to ~30 minutes.
- Managed AWS infrastructure (EC2, VPC, S3, IAM, Lambda, CloudWatch) across production and staging, and authored 3+ reusable Terraform modules for consistent, version-controlled provisioning.
- Ran production Kubernetes cluster operations and delivered end-to-end deployments of 5+ containerized applications using YAML manifests and Docker.
- Operated ~600 ETL / batch jobs on Autosys and CA Workload Automation feeding the client's enterprise data warehouse, and engineered shell-based failure guardrails with automated pre-checks and retries to cut repeat batch failures.
- Wrote and optimized Oracle SQL queries to validate data integrity and troubleshoot pipeline failures across ETL stages.
- Monitored application and infrastructure health with Dynatrace and CloudWatch, performing root cause analysis and resolving 10+ production incidents and change tickets per month in ServiceNow, with privileged access managed via CyberArk.

PROJECTS

Kubernetes GitOps Platform — Terraform, Helm, ArgoCD

github.com/Jeevankatta/k8s-gitops-platform

- Provisioned a 3-node Kubernetes cluster and 5 platform add-ons using modular Terraform with for_each modules and remote state locking; authored a Helm chart with probes, HPA, PodDisruptionBudget and least-privilege RBAC for zero-downtime rolling updates.
- Implemented pull-based GitOps with ArgoCD and canary releases via Argo Rollouts; deployed Prometheus, Grafana and Alertmanager with 4 PromQL alert rules, and enforced 3 Kyverno admission policies.

DevSecOps CI/CD Pipeline — GitHub Actions, Trivy, SonarCloud

github.com/Jeevankatta/devsecops-pipeline

- Designed a 7-job GitHub Actions pipeline with 4 build-failing security gates (SonarCloud SAST, OWASP Dependency Check, Trivy image scanning, gitleaks) and an ephemeral Kubernetes cluster in CI for end-to-end deployment testing.
- Reduced container image size ~60% with multi-stage builds; hardened runtime with a non-root user and read-only filesystem, and enforced immutable Git SHA tags with OIDC-based short-lived cloud credentials.

CERTIFICATIONS

AWS Certified Cloud Practitioner | AWS Academy Graduate — Cloud Architecting | Gen AI Intermediate Voyager

EDUCATION

B.Tech, Electronics and Communication Engineering — Sreenidhi Institute of Science and Technology, Hyderabad | 2019 – 2023
